PRODUCT INFORMATION LETTER

PIL-0013

Date: September 10, 2008

Subject: Cam and Wedge Brake Components

Product Models Affected: Planetary axles with the P or RSA or RSH or RDA or RDH designation appearing within the axle model number -- examples: PRC775Pxxx, SPRC1927Pxxx, PSC826RSAxxx.

Dear Customer,

Due to re-sourcing of certain brake related components AxleTech International has made some part number changes within the Bill of Materials. This will enhance traceability.

Change:

The brake group specification number within the axle spec will change as well as some components part numbers. However, please note that the upper level axle specification number will not change.

Examples of Brake Groups or Components within the axle specification:

- cam brake group: QP6-1656-xxx will be replaced by CQN-419-152-xxx
- camshaft part number: 2210W8629 will be replaced by 221001107E

Discussion:

The brake assemblies, brake groups, and all of the components within them are 100% interchangeable with the old. Form, fit, and function will not be affected.

AxleTech is using the same brake lining manufacturers and lining materials as before. In most cases the lining material designation has been changed to an AxleTech number. In other words, the lining block 'edge code' you see will be different, but it is the same lining as before. Your axle / brake Application Approval and warranty are not affected.

Implementation:

AxleTech will be changing over to these new components on a 'running change' basis.

Contact:

For additional information (such as your new brake group Specific Drawing which now also includes the Parts List and Exploded Views – or for your effectivity date) please contact your AxleTech International sales representative.
