

Steel Brake Shoes

SIGNIFICANT TOTAL COST & WEIGHT SAVINGS OVER CAST IRON SHOES

Fabricated steel brake shoe construction can save over 40% when compared to new cast shoes

Overview

Traditional cast iron shoe designs available in the market today are often expensive, heavy and require significant effort to service and install. New fabricated steel shoes from Truck Trailer Transit are less expensive and lighter when compared to traditional cast iron brake shoes.

Features

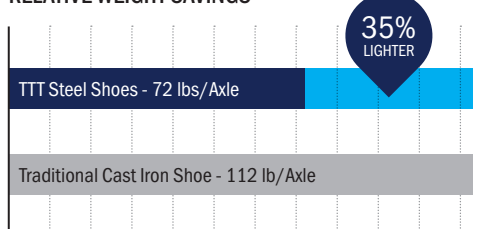

- Stamped and fully welded construction
- Significant weight reduction
- Eliminates need for core exchange program
- New quality at near-rebuilt price

Advantages

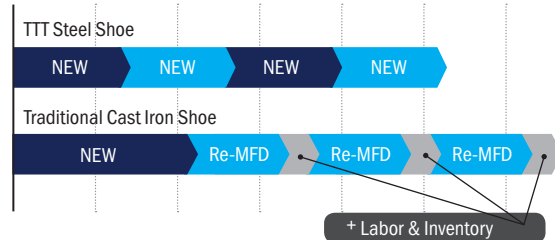

- Lower cost when compared to cast iron shoes
- Safer and lighter
- Reduces storage, logistics and costs over rebuilt cast shoes
- Consistent quality over rebuilt cast shoes

Benefits

RELATIVE WEIGHT SAVINGS

COST SAVINGS over Multiple Service Intervals

Truck Trailer Transit Fabricated Steel Shoes: Successfully used for nearly 100,000 miles and trusted by several large Transit Authorities across North America!
